CLAIMS

What we claim as our invention is:

4. A convertible sling apparatus made of fabric for use by an individual for the purpose of personally transporting harvested wild birds, animals, fish and other types of cargo, which utilizes two adjustable shoulder straps and two separating zippers which function in a pull-down configuration, which allows the apparatus' free-forming platform to function as a closed-end, open top bag when the pull-tabs of both zippers are drawn all the way down, **or**, as a form of sling when either or both of the zippers are adjusted up, **or** separated, to accommodate varying sizes and shapes of cargo in a secure environment while the cargo is being personally transported in a hands free manner by the use of shoulder straps.

5. We also claim that the use of our invention while an individual is transporting harvested wild game, will help to minimize the transfer of fleas, ticks and other parasites from harvested game to the individual transporting the game, by keeping the game secure in the apparatus, yet outside of the individuals clothing while game is being transported.

6. We further claim that the water-resistant coating used on the platform fabric of our invention while personelly carrying harvested wild game will minimize the transfer of blood and blood-born pathogens from the game to the individual transporters clothing.
